Energy Association of PA Exhibit Cautions Public on Working Near Electric or Gas Lines at Southeastern PA One Call Safety Event

HARRISBURG (May 7, 2018) -- The Energy Association of Pennsylvania is participating in the Pennsylvania One Call System's Southeastern PA Safety Day on Tuesday, May 15, 2018 at the Greater Philadelphia Expo Center, 100 Station Street, Oaks, PA 19456. The free program is open to the public from 7 a.m. until 2 p.m. and brings together damage prevention, underground utility and excavation professionals from all over the region for a day of education, exhibits and enjoyment. The program focus will be the new one call law changes.

The Energy Association, on behalf of its statewide electric and natural gas member companies, will be featuring a safety display at this May 15th event. Safety is of paramount importance to the Energy Association and its member companies.

With the onset of warm weather and Pennsylvanians taking on those outdoor projects, the EAP's display will focus on the precautions that should be taken when operating near utility facilities. What to do before beginning any digging or excavation project, cross bores safety awareness, as well as the importance of making sure there is adequate space from overhead power lines – information on OSHA's "Ten Foot Circle of Safety" - will be featured.

"Pennsylvania's energy utilities want to educate the public on how to stay safe," said Terrance J. Fitzpatrick, President and CEO, Energy Association of Pennsylvania. "Before you begin to dig anywhere, you should check with PA One Call System by calling 8-1-1, to prevent damage to underground facilities and avoid potentially hazardous situations. We congratulate our members for their continuing commitment to improve safety for their customers and in the workplace.

For well over two decades, the Association and our predecessor organizations have been recognizing companies for their efforts in safety through the EAP's annual Safety Awards program."
